SUMMARY

Computer Science graduate (B.Tech, 2026) with hands-on project experience in hybrid cloud infrastructure across Azure and AWS, including Site-to-Site VPN, Active Directory and Microsoft Entra ID integration. Has also completed internships in front-end development and machine learning. Seeking an entry-level cloud or infrastructure role.

EDUCATION

Vishnu Institute of Technology, Bhimavaram 2026

Bachelor of Technology in Computer Science and Engineering -- GPA: 8.48/10

Chaitanya Junior College,Nandigama 2022

Intermediate (MPC Stream) – GPA: 6.1/10.00

Zilla Parishad High School,Nandigama 2020

SSC – GPA: 9.1/10.00

TECHNICAL SKILLS

Cloud & Networking: Microsoft Azure, Site-to-Site VPN, NSGs
Identity & Access: Active Directory (AD DS, DNS, GPO), Microsoft Entra ID
DevOps & Infrastructure: Docker, Kubernetes, Terraform, Linux, Git, GitHub
Programming: Python, Java, JavaScript
Web Development:HTML,CSS
Databases: MySQL, MongoDB

PROJECTS

Hybrid Cloud Identity & Secure Access Infrastructure 2026

Azure, AWS, AD DS, Microsoft Entra ID, VPN

- Connected Azure and AWS networks over a Site-to-Site VPN with private networking, routing and security controls.
- Set up an Azure-hosted domain controller running AD DS and DNS. Configured users, OUs, security groups, GPOs and role-based access.
- Synced users and groups from Active Directory to Microsoft Entra ID for centralized identity management.
- Enabled AD authentication for AWS Windows servers. Applied least-privilege access through AD groups, NSGs, firewall rules and AWS Security Groups.

Event-Graph Framework for Observability and Visual Analysis of Quantum Programs 2026

- Built a framework that traces gate operations, qubit states and execution order across quantum circuit runs.
- Modeled execution as a dependency graph to show control flow and data dependencies visually.
- Added replay of captured executions without re-running the circuit, reducing repeat runs during debugging.

INTERNSHIPS

Front-End Development Intern (Virtual), Cognifyz Technologies 2024

- Built 5+ responsive, mobile-friendly web pages using HTML, CSS, JavaScript and SCSS.
- Integrated REST APIs using asynchronous JavaScript to fetch data and display content dynamically on the pages.
- Used semantic HTML and ARIA labels for accessibility, and checked layouts across browsers and devices.

AI/ML Intern (Virtual), AICTE 2024

- Built a classification model to sort waste into recyclable, organic and hazardous categories.
- Preprocessed and labeled the image dataset, then tuned model parameters and validated results on test splits.
- Documented findings on using automation for sustainable waste management.

CERTIFICATIONS

- MongoDB (GeeksforGeeks)
- Java Fundamentals (edX)
- Python Basics (Infosys Springboard)
- Fundamentals of Deep Learning (NVIDIA)
